## Revolutionizing the Emergency Radiology Care

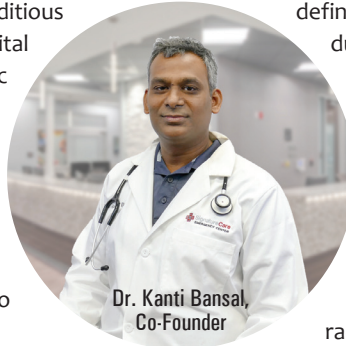

The field of radiology is evolving at an expeditious rate with the introduction of novel digital imaging technologies and diagnostic tools. But the field has its own drawbacks. Patients are required to make radiology appointments weeks in advance and still might have to spend hours in the waiting room before getting their imaging studies done. Even the accessibility to emergency centers takes longer than usual for patients to undergo diagnostic imaging and quality care.

SignatureCare Emergency Center, a premier integrated healthcare provider, resolves the dilemma with its best-in-class radiology programs in emergency centers that help patients gain access to quick, safe, and effective medical care. Having specialized in quick emergency care, SignatureCare's board-certified ER physicians and licensed staff, provides top-notch medical and radiology services for both adult and pediatric medical emergencies all year round, 24/7. "We take pride in providing white glove services to our patients with utmost care and uniformity," says Dr. Kanti Bansal, co-founder, SignatureCare Emergency Center.

SignatureCare Emergency Center's genesis traces back to 2013. After years of witnessing overpopulated emergency centers in local communities that adversely affected patients' health, accessibility, and quality of healthcare, a talented team of three physicians—Hashibul Hannan, Aaron Braun, and Kanti Bansal—wanted to make a change. Driven by a quest to make quality emergency medical care accessible, they wanted to reinvent the emergency care system through SignatureCare Emergency Center. Since then, it has come a long way from a local emergency center to the most successful chain of freestanding emergency care centers in multiple locations across the U.S., fulfilling emergency medical needs.

SignatureCare Emergency Center offers state-of-the-art imaging equipment, starting from multi-slicer CT scan machine to high-resolution digital X-rays and ultrasounds. They are of the highest standards, helping radiology physicians and technologists get a clearer picture of potential damages in internal organs and diagnose them quickly.

While most emergency centers have 16-slicer CT scan machines, SignatureCare Emergency Center is heavily invested in 64-slicer CT scan machines that grant the patients minimal time and exposure to radiation, while enabling physicians to undertake a more complex study and

definitive diagnosis of patients. The employment of dual modality technologists enables the ability to perform complex specialty exams such as CCTAs and CTA run-offs, which are typically not performed in a speedy manner. SignatureCare Emergency Center also employs the SmartmA and ASiR software to minimize the radiation exposure on patients' bodies.

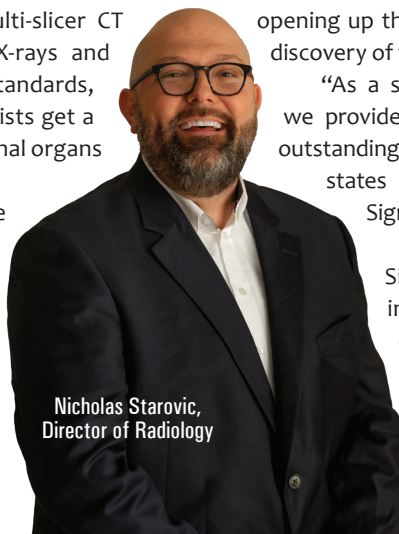

The backbone of SignatureCare Emergency Center is its team of multi-talented radiology and nursing staff led by physicians who carry out complex radiology studies in a safer, compassionate, and rapid manner. They treat patients with diverse complications such as serious drug overdoses, septic infections, diabetic emergencies, gunshot wounds, motorcycle accidents, heart attacks, and strokes.

**“We take pride in providing white glove services to our patients with utmost care and uniformity”**

With its superior standard of care, SignatureCare Emergency Center plays an indispensable role in saving numerous lives. A recent case involving a 40-year-old man attests to this fact. The patient walked into one of the company's emergency centers, complaining of a mild muscle pain in his chest. All general tests, including EEG and blood work, appeared normal and the patient was under continued observation. This was followed by an advanced coronary CT scan, which revealed major blocks in his left anterior descending artery. SignatureCare Emergency Center with its interventional cardiologist performed an immediate surgery, opening up the patient's blood vessels. It was the early discovery of the disease that saved his life.

"As a successful freestanding emergency center, we provide superior healthcare services and deliver outstanding value through our clinical innovations," states Nicholas Starovic, Director of Radiology, SignatureCare Emergency Center.

Every step means better care with SignatureCare Emergency Center. Honing in on its years of experience, devotion, and commitment, SignatureCare Emergency Center continues to make the patients' lives better. **HB**
